

JENKINS

To create a new user in Jenkins, you can follow these steps:

- Log in to your Jenkins controller.
- Navigate to the Jenkins dashboard and select "Manage Jenkins".
- Under the Security Interface, select "Manage Users".
- Select "Create User" to add a new user to the Jenkins server.
- In the "Create User" window, add the details of the user that you wish to create such as the target username, password, full name, and email address.
- Once satisfied with the details, click "Create User" to add the specified username to the server.
- After creating the user, you can then assign roles and permissions to the user using the Role-Based Authorization Strategy plugin

To set up role-based access control in Jenkins using the Role-Based Authorization Strategy plugin, follow these steps:

Install the Role-Based Authorization Strategy plugin from the Jenkins Plugin Manager.

- Enable the plugin by going to "Manage Jenkins" > "Configure Global Security" and selecting "Role-Based Strategy" as the authorization strategy.
- Define the roles you want to use by going to "Manage Jenkins" > "Manage and Assign Roles" > "Manage Roles". You can create global roles, item roles, and agent roles.
- Assign the roles to users and user groups by going to "Manage Jenkins" > "Manage and Assign Roles" > "Assign Roles". You can assign roles globally or to specific projects.
- Customize the permissions for each role by going to "Manage Jenkins" > "Manage and Assign Roles" > "Configure Global Security" and selecting the "Pr". From there, you can assign permissions for each role on a global or project-specific basis.

By following these steps, you can set up role-based access control in Jenkins using the Role-Based Authorization Strategy plugin. This will allow you to define fine-grained roles for proper access control to your Jenkins server.

Dashboard > Manage Jenkins

 **Manage and Assign Roles**
Handle permissions by creating roles and assigning them to users/groups

 **Users**
Create/delete/modify users that can log in to this Jenkins.

Status Information

 **System Information**
Displays various environmental information to assist trouble-shooting.

 **System Log**
System log captures output from java.util.logging output related to Jenkins.

 **Load Statistics**
Check your resource utilization and see if you need more computers for your builds.

 **About Jenkins**
See the version and license information.

Troubleshooting

 **Manage Old Data**
Export configuration files to...
